

A1  
canceled

wherein said micellar complexes have a substantially homogenous size distribution.

A2

4. (Amended) A method of making micellar complexes according to claim [4] 1, wherein said at least one cationic lipid and said DNA are present in a lipid:DNA ratio of 1:8vol:vol.

5. (Amended) A method of making micellar complexes according to claim 1, wherein the size distribution [of a group] of the micellar complexes [varies by] is less than 20% [relative to the average size of a complex in said group of micellar complexes].

A3

15. (Amended) A micellar complex according to claim 14, wherein said at least one cationic lipid and said DNA are present in a lipid:DNA ratio of 1:8vol:vol.

16. (Amended) A group of micellar complexes comprising a micellar complex [according to] of claim 9, wherein the size distribution of [a] the group of micellar complexes varies [by] less than 20% [relative to the average size of a complex in said group of micellar complexes].

A4

20. (Amended) A method of delivering a biologically active molecule to a cell of a mammal according to claim 19, wherein said at least one cationic lipid and said DNA are present in a lipid:DNA ratio of 1:8vol:vol.

sub C3  
A5

25. (Amended) A micellar complex comprising:  
at least one cationic lipid;  
at least one PEG derivative; and  
at least one biologically active molecule;
